

Since 1991.

Polish manufacturer of equipment for environmental protection.

**Over 30 years of knowledge, experience,
implementation, production and improvement.**

**ENKO was established in 1991 and initially operated as
Gliwice Electronic Devices Plant ENKO S.C.**

**Due to the dynamic development, in February 1996 ENKO
was transformed into a joint-stock company. The
company's headquarters is located**

in Gliwice. At present, the ENKO Group consists of:

ENKO Sp. z o.o. and ENKO-POMIAR Sp. z o.o.

**ENKO-POMIAR is the largest Polish manufacturer of
electromagnetic flow meters, Ex flow meters and the only
manufacturer of the metering system for slurry tankers.**

**ENKO Sp. z o.o. specializes in the production of
equipment for mechanical wastewater treatment. ENKO
also undertakes comprehensive implementation of tasks
including: concepts, designs and execution based on
manufactured devices.**

Reference countries ENKO:

Poland

Czech Republic

Ukraine

Cuba

Sri Lanka

Canada

Lithuania

Russia

Great Britain

Vietnam

Egypt

Latvia

Sweden

France

Germany

Kazakhstan

Belarus

Holland

Saudi Arabia

South Korea

India

Wastewater disposal station STZ

* optional station equipped with an external heated stone catcher

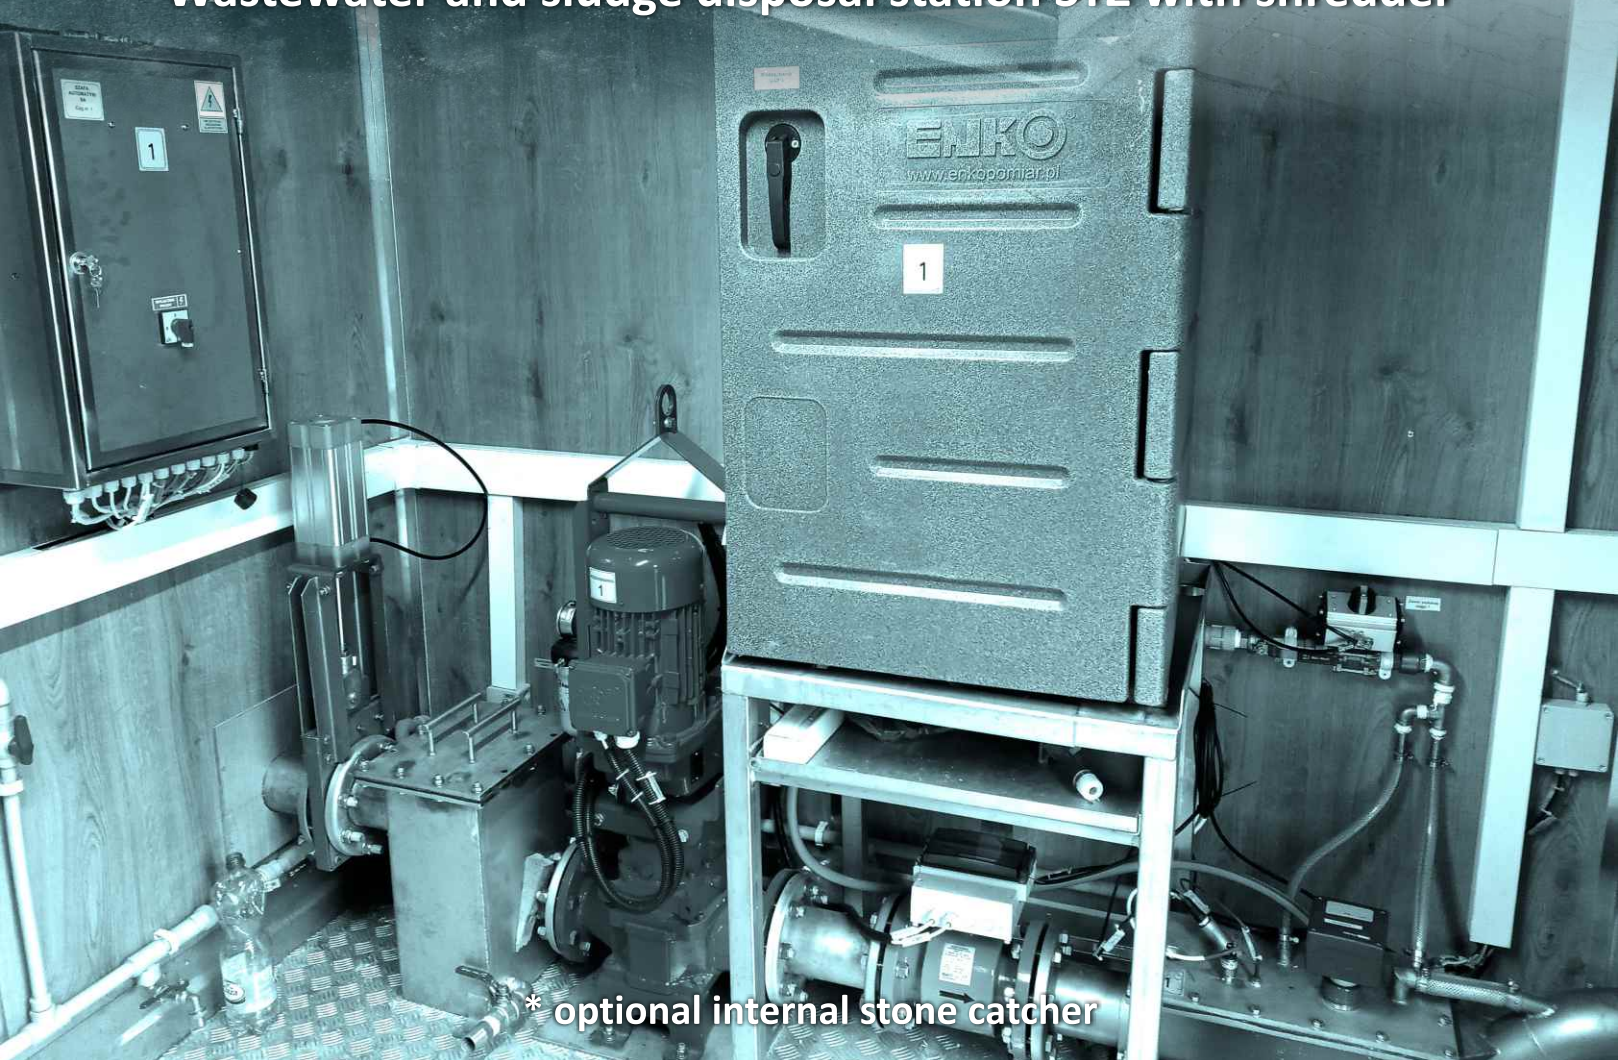

Wastewater and sludge disposal station STZ with screenings screen

*** optional scrap bagging system**

Wastewater and sludge disposal station STZ with shredder

Step screen type KSE

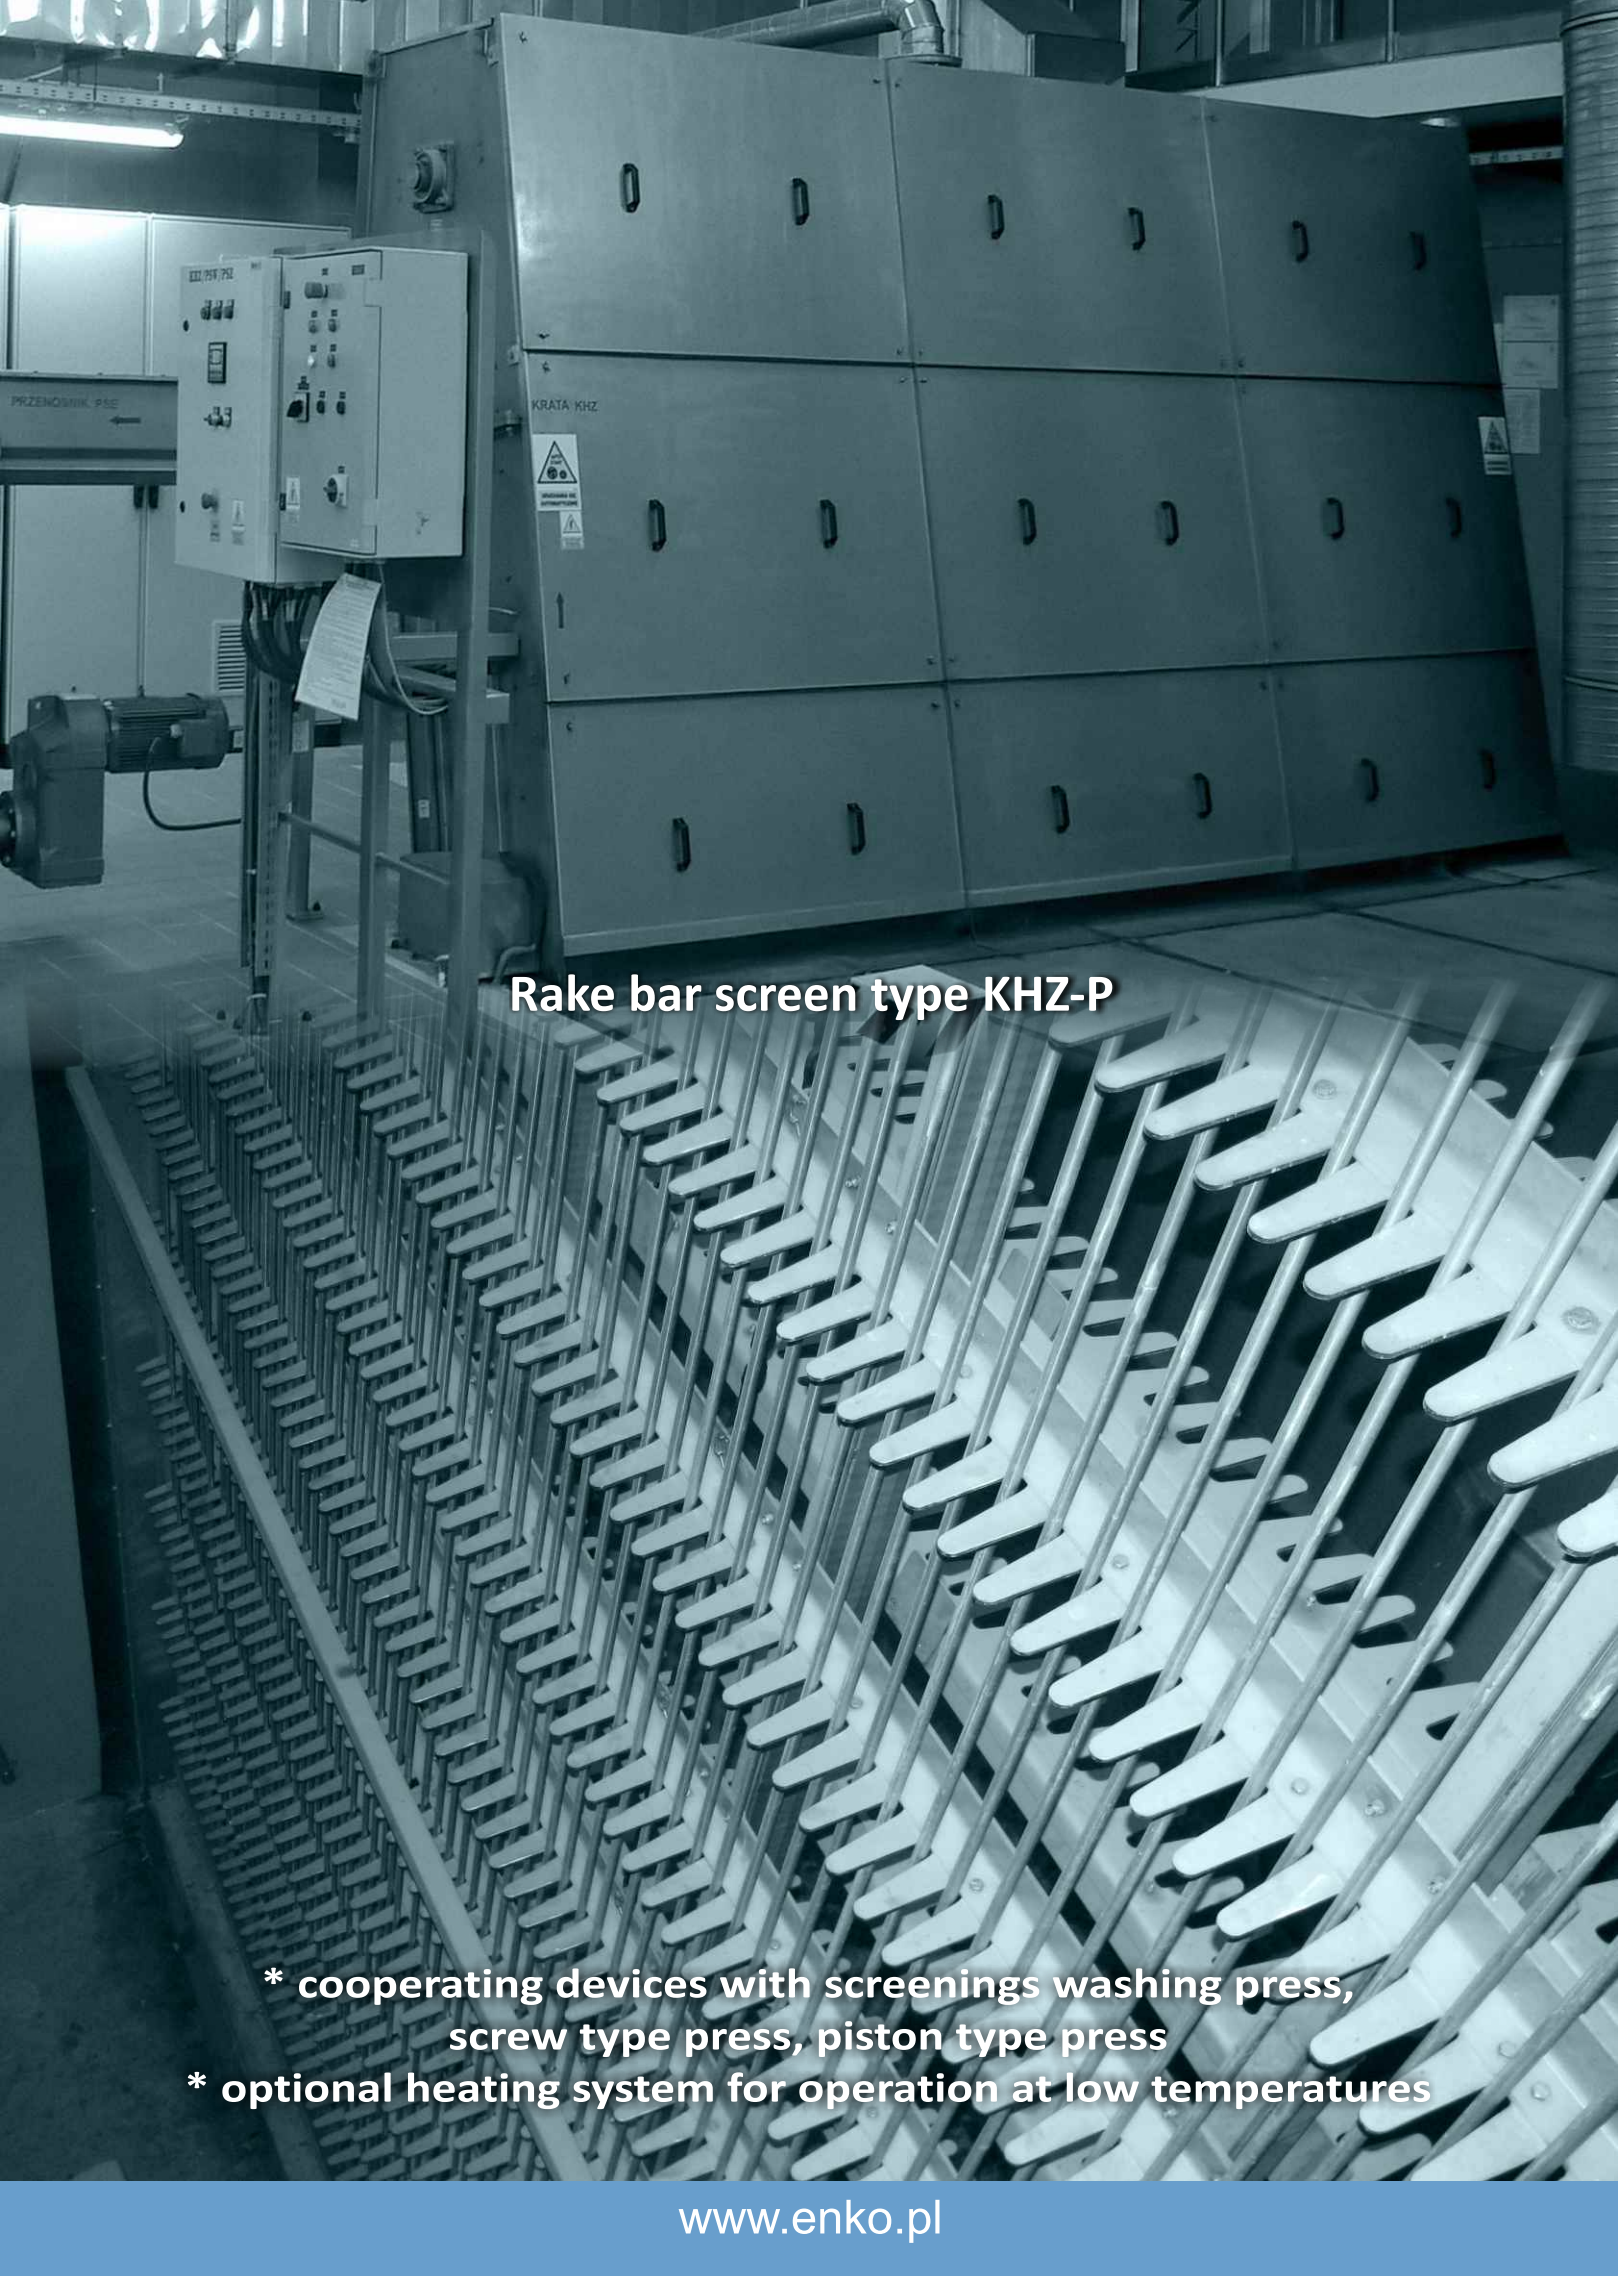

- * cooperating devices with screenings washing press, screw type press, piston type press
- * optional heating system for operation at low temperatures

Scraper screen type KHZ

- * cooperating devices with screenings washing press, screw type press, piston type press
- * optional heating system for operation at low temperatures

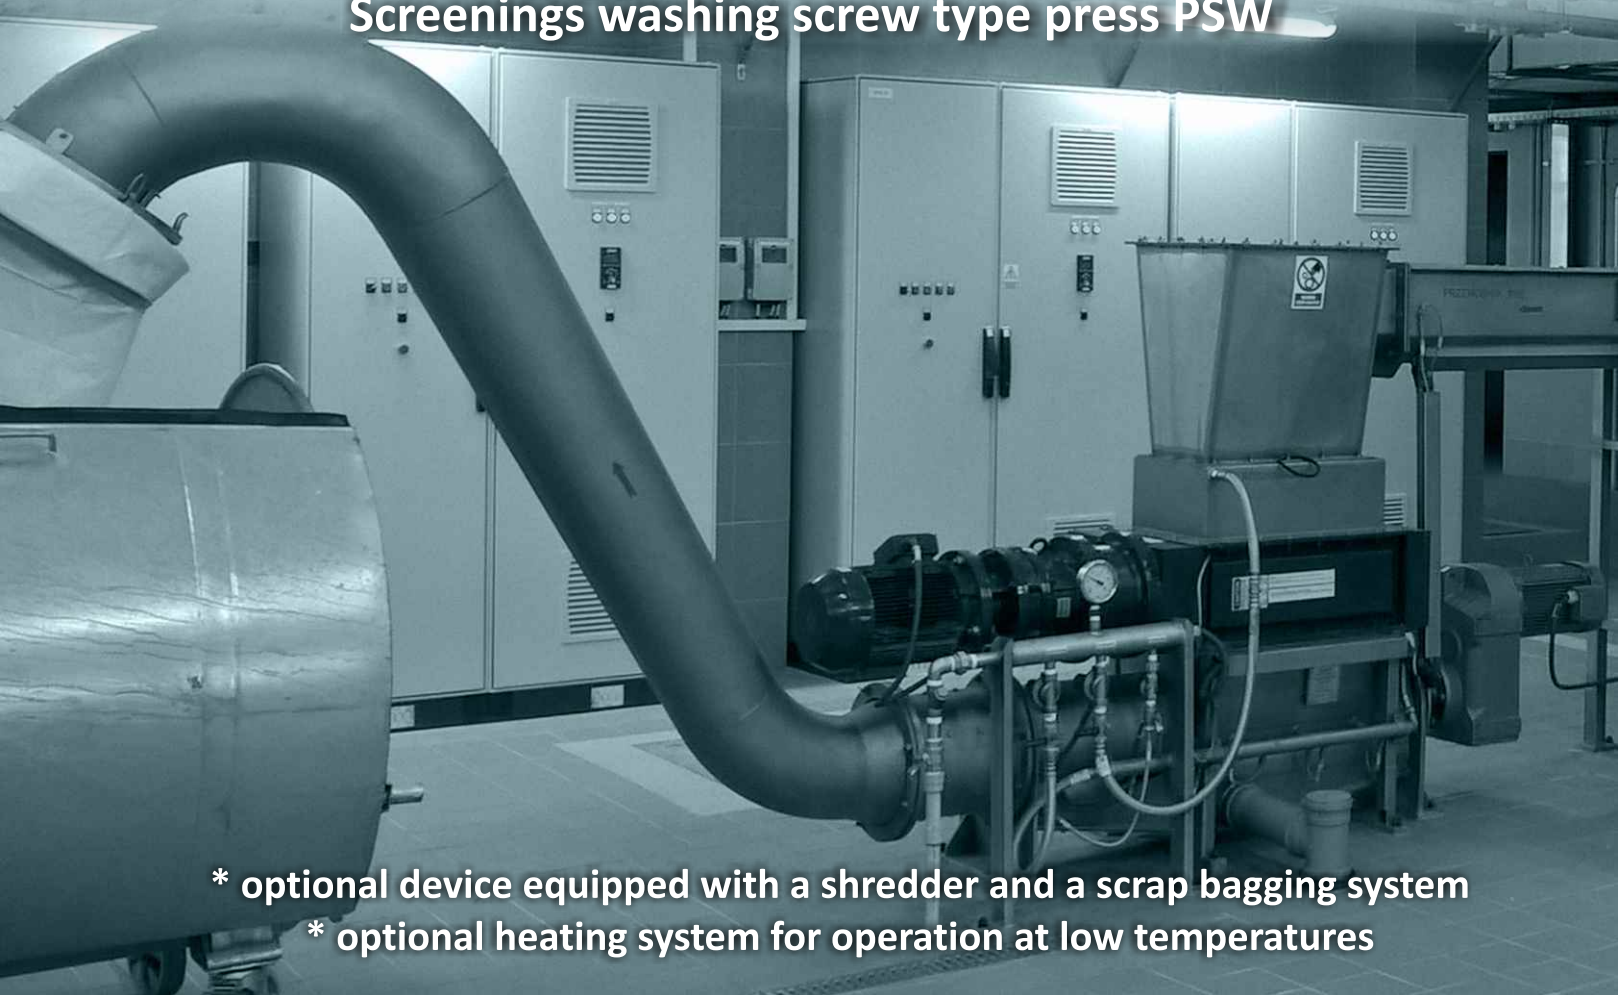

Rake bar screen type KHZ-P

- * cooperating devices with screenings washing press, screw type press, piston type press
- * optional heating system for operation at low temperatures

Screenings screw type press PSW
Screenings washing screw type press PSW

- * optional device equipped with a shredder and a scrap bagging system
- * optional heating system for operation at low temperatures

Piston type screenings press PRE

* optional device equipped with a scrap bagging system

Basket screen type KKE

Integrated Mechanical Pre-treatment unit type ZSP

*** optional device equipped with a system of aeration, fat removal system, screenings washer, sand washer, heating system**

Installation for the collection of wastewater

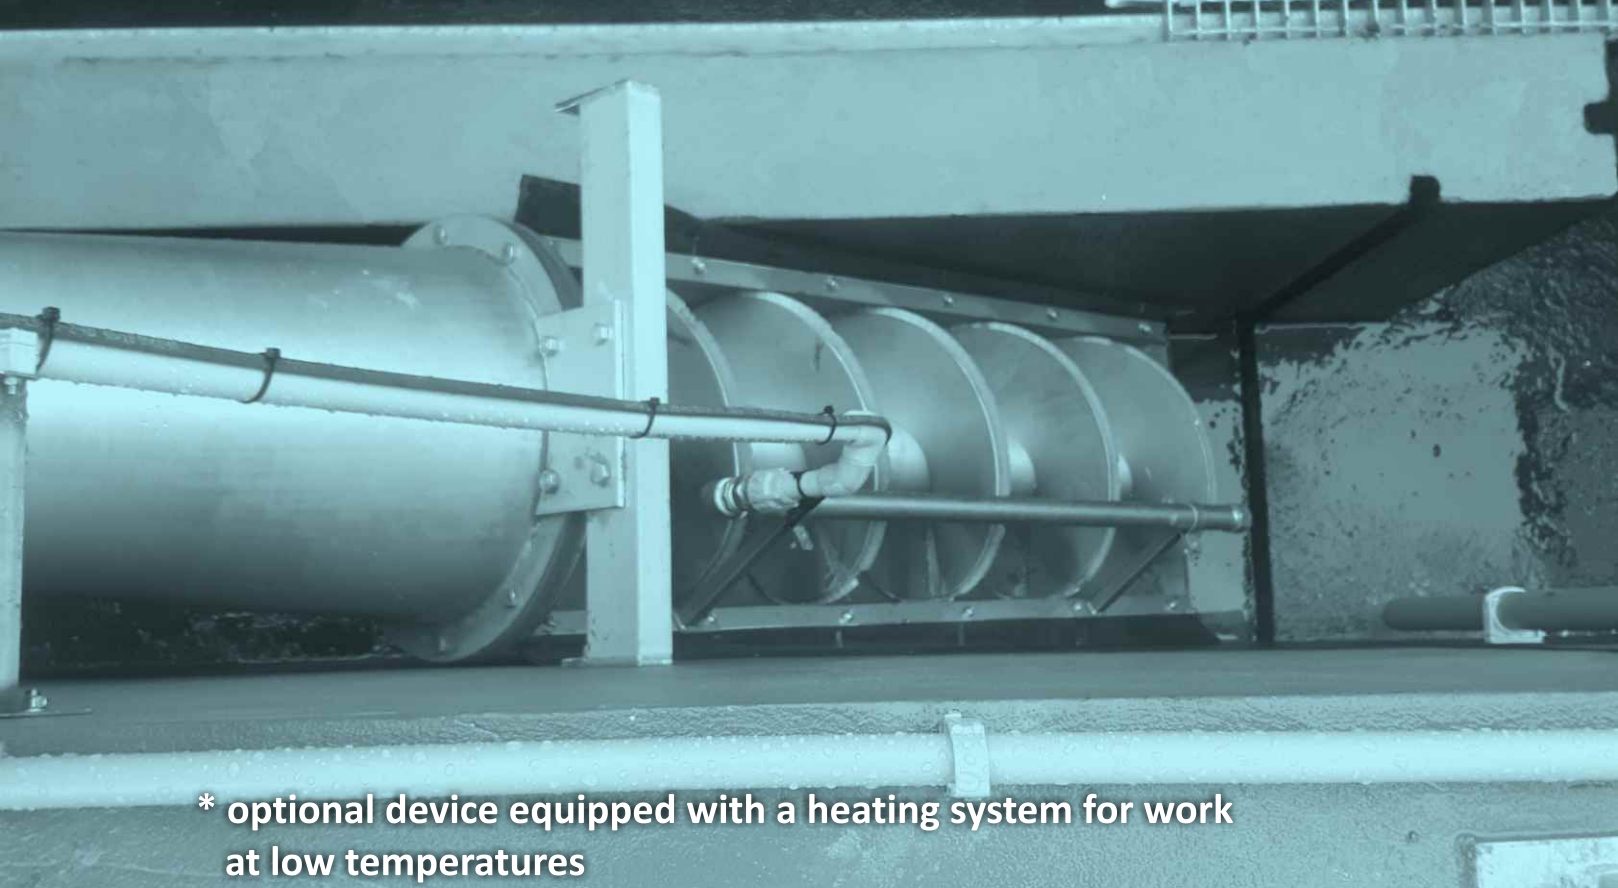

sewage water from sewer cleaning type SMW

Channel screen type SBK

*** optional device equipped with a heating system for work at low temperatures**

Drum screen type SBO

* optional device equipped with a heating system for work at low temperatures

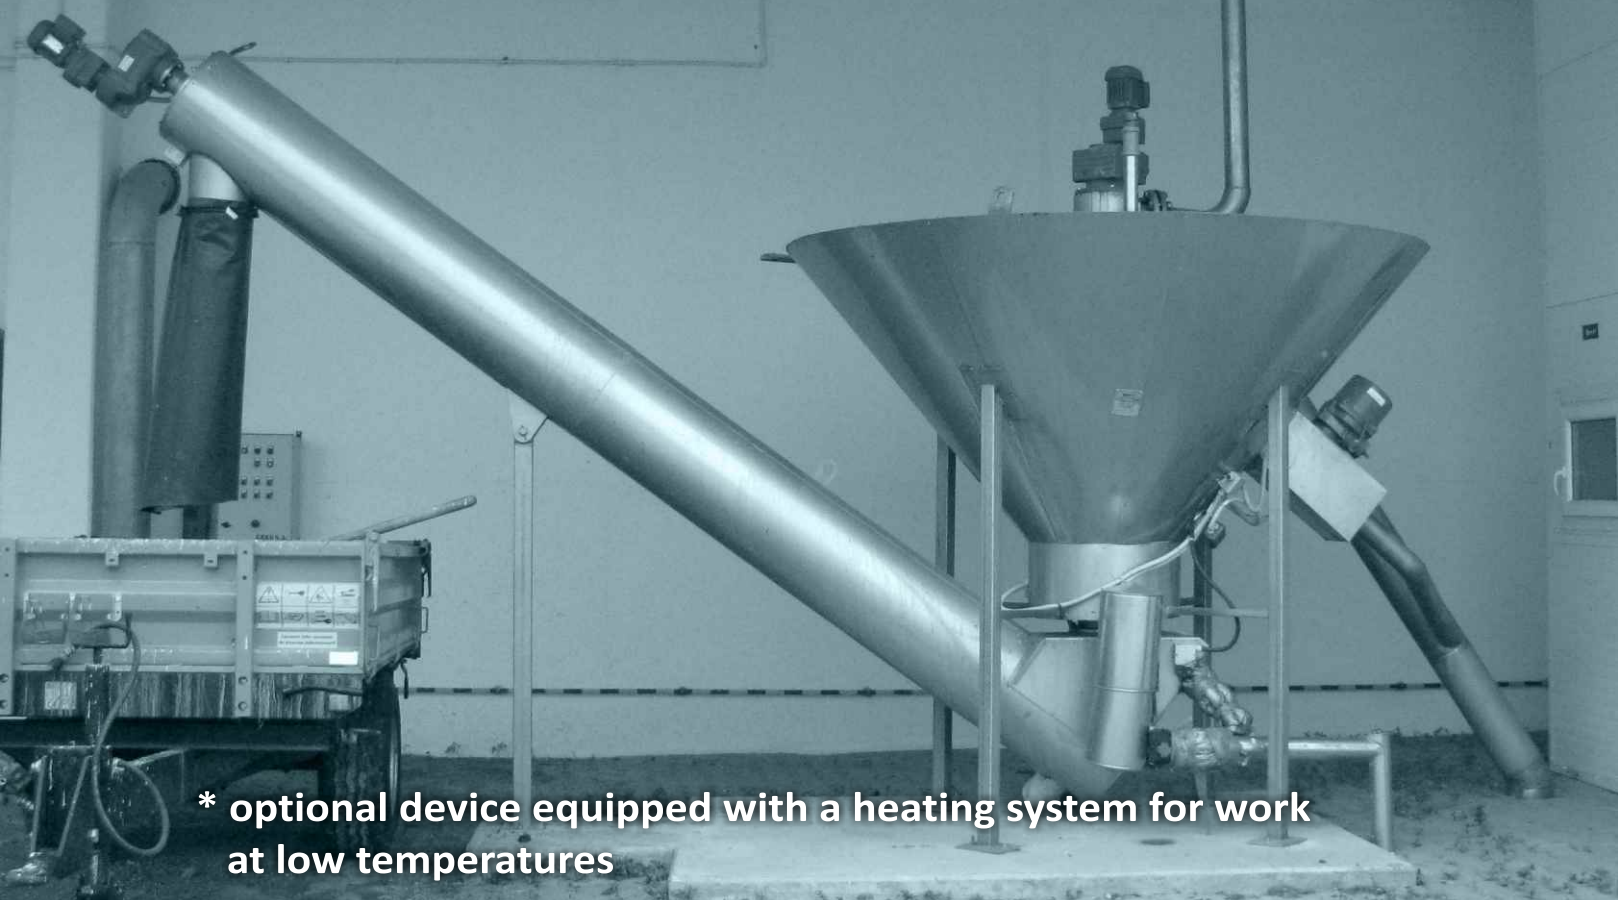

Screenings drum screen with internal inflow type SBW

* optional device equipped with a heating system for work at low temperatures

Sand separator with washing system type WPP WashMem

*** optional device equipped with a heating system for work at low temperatures**

Sand separator type PSK

*** optional device equipped with a heating system for work at low temperatures**

Centrifugal desander type PWE

* optional device equipped with a heating system for work at low temperatures

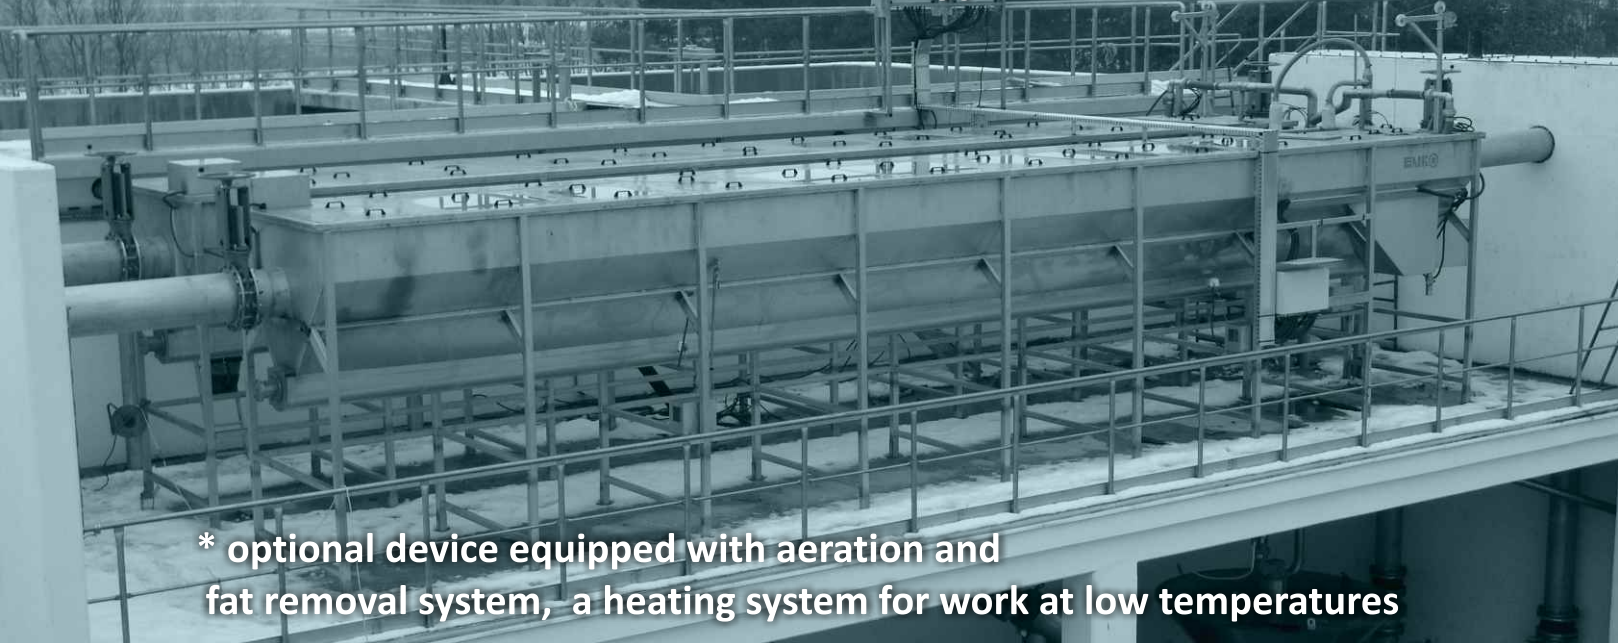

Sand washer type PPE

*** optional device equipped with a heating system for work at low temperatures**

Channel desander type PKE

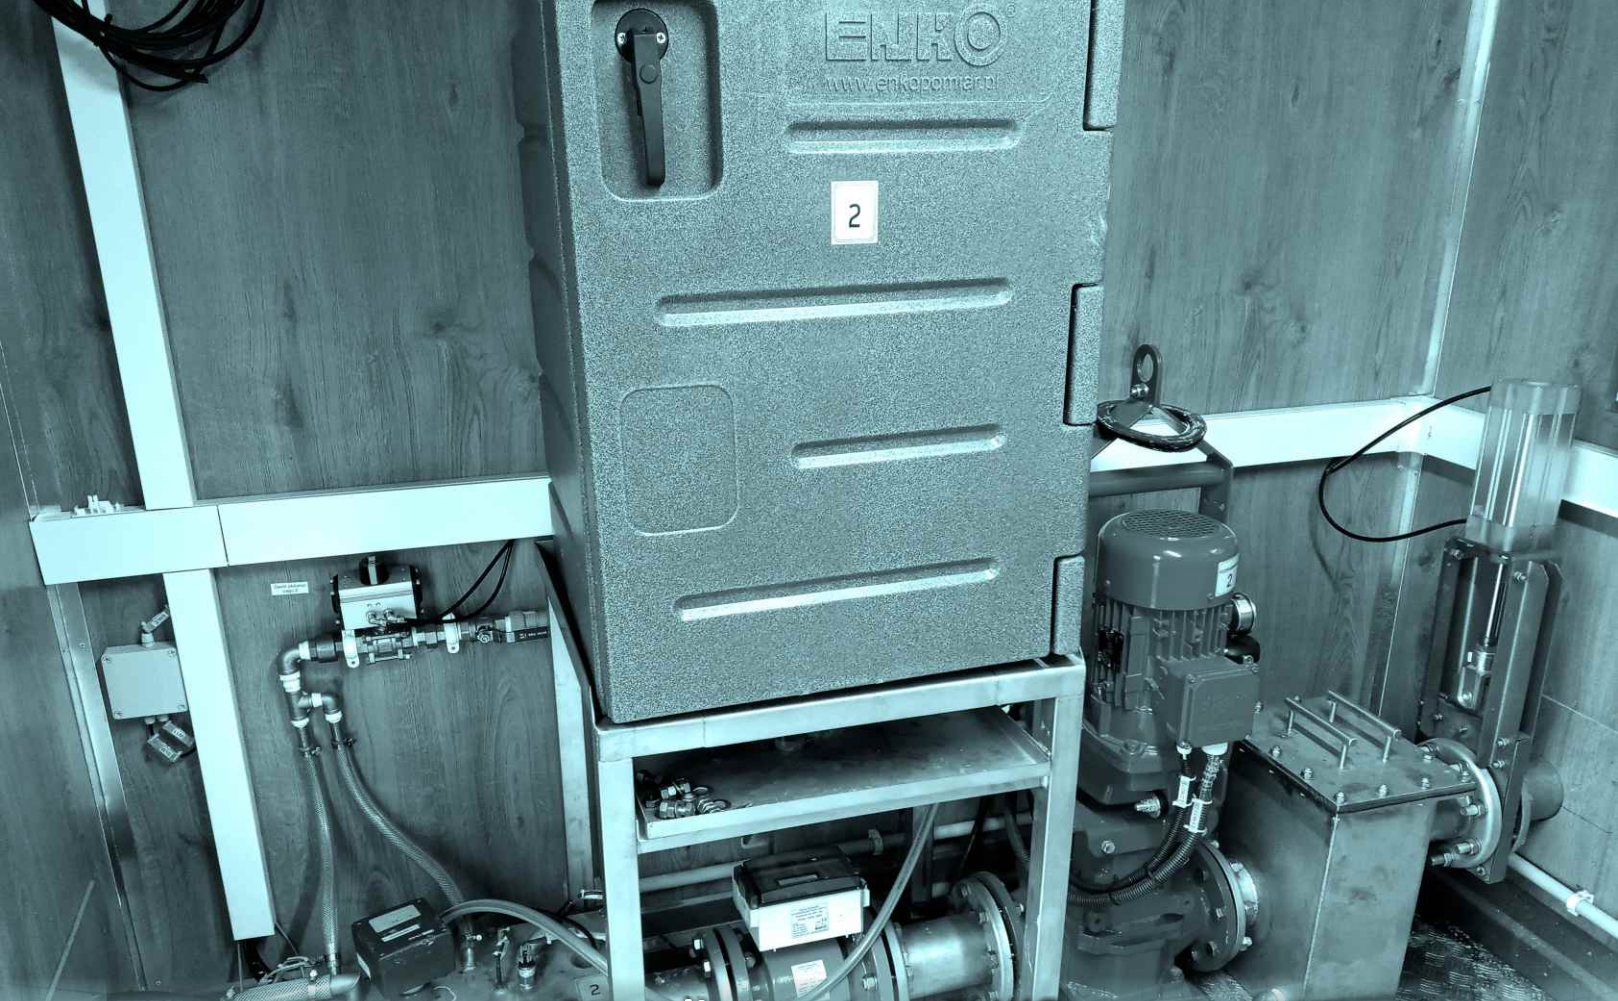

*** optional device equipped with aeration and fat removal system, a heating system for work at low temperatures**

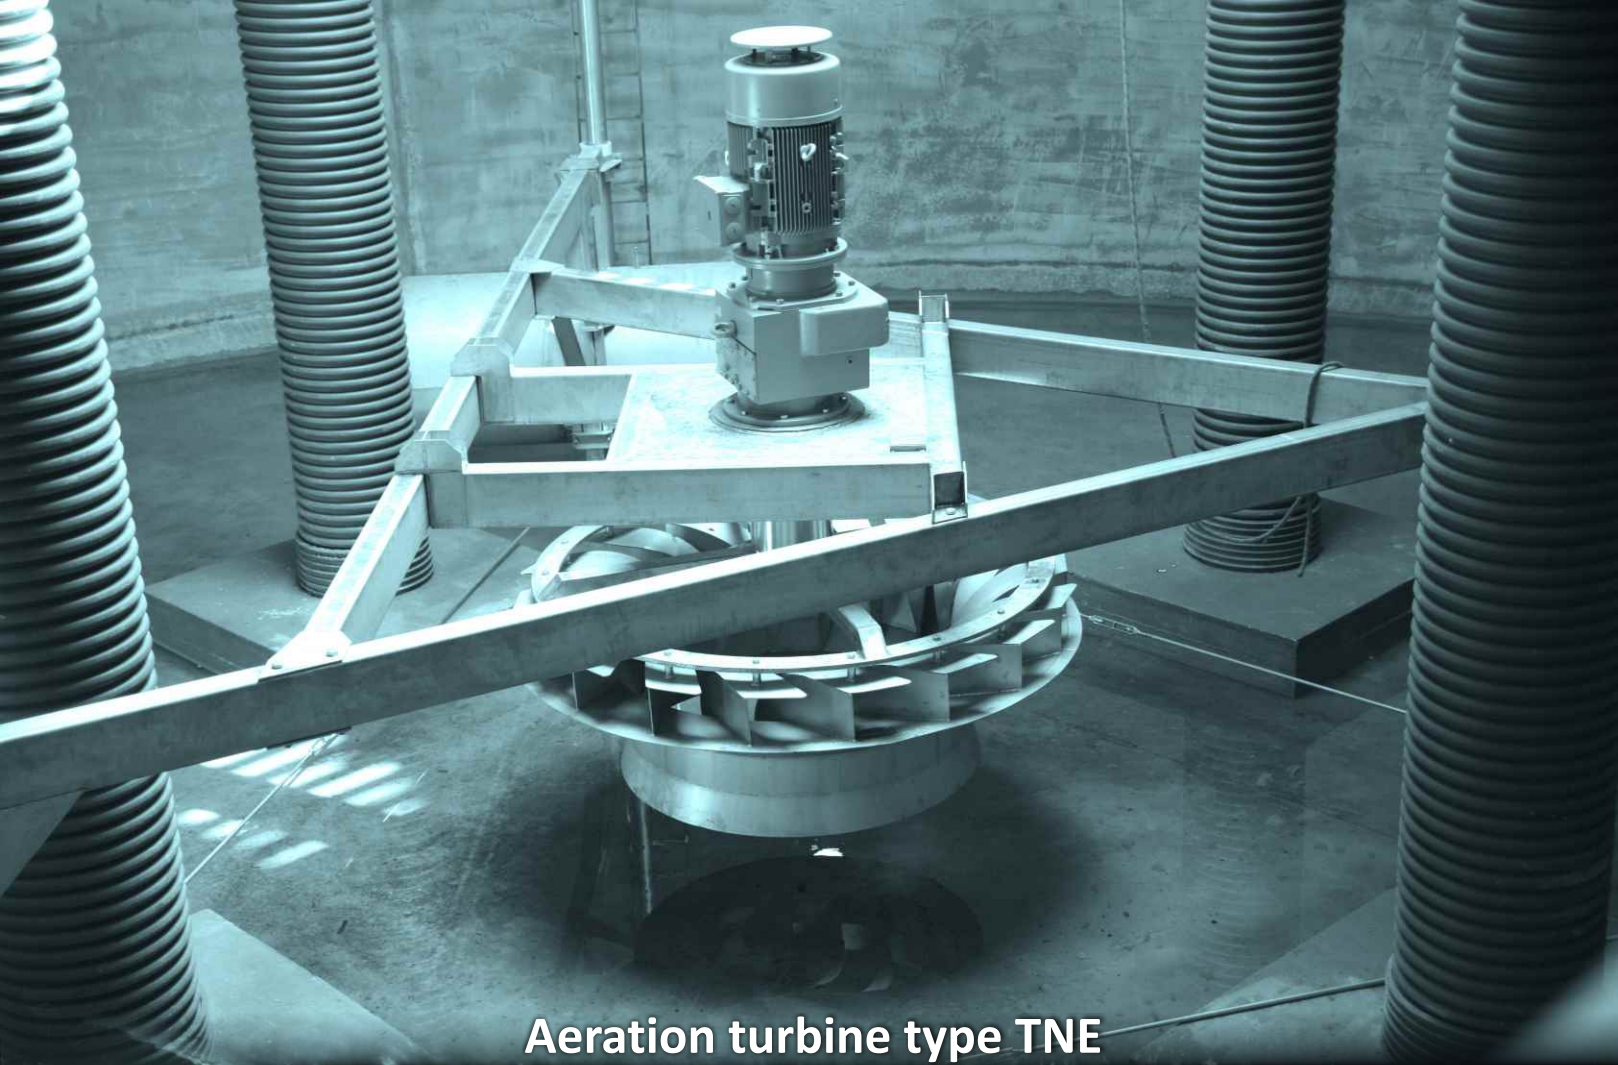

Sand scraper type ZGP

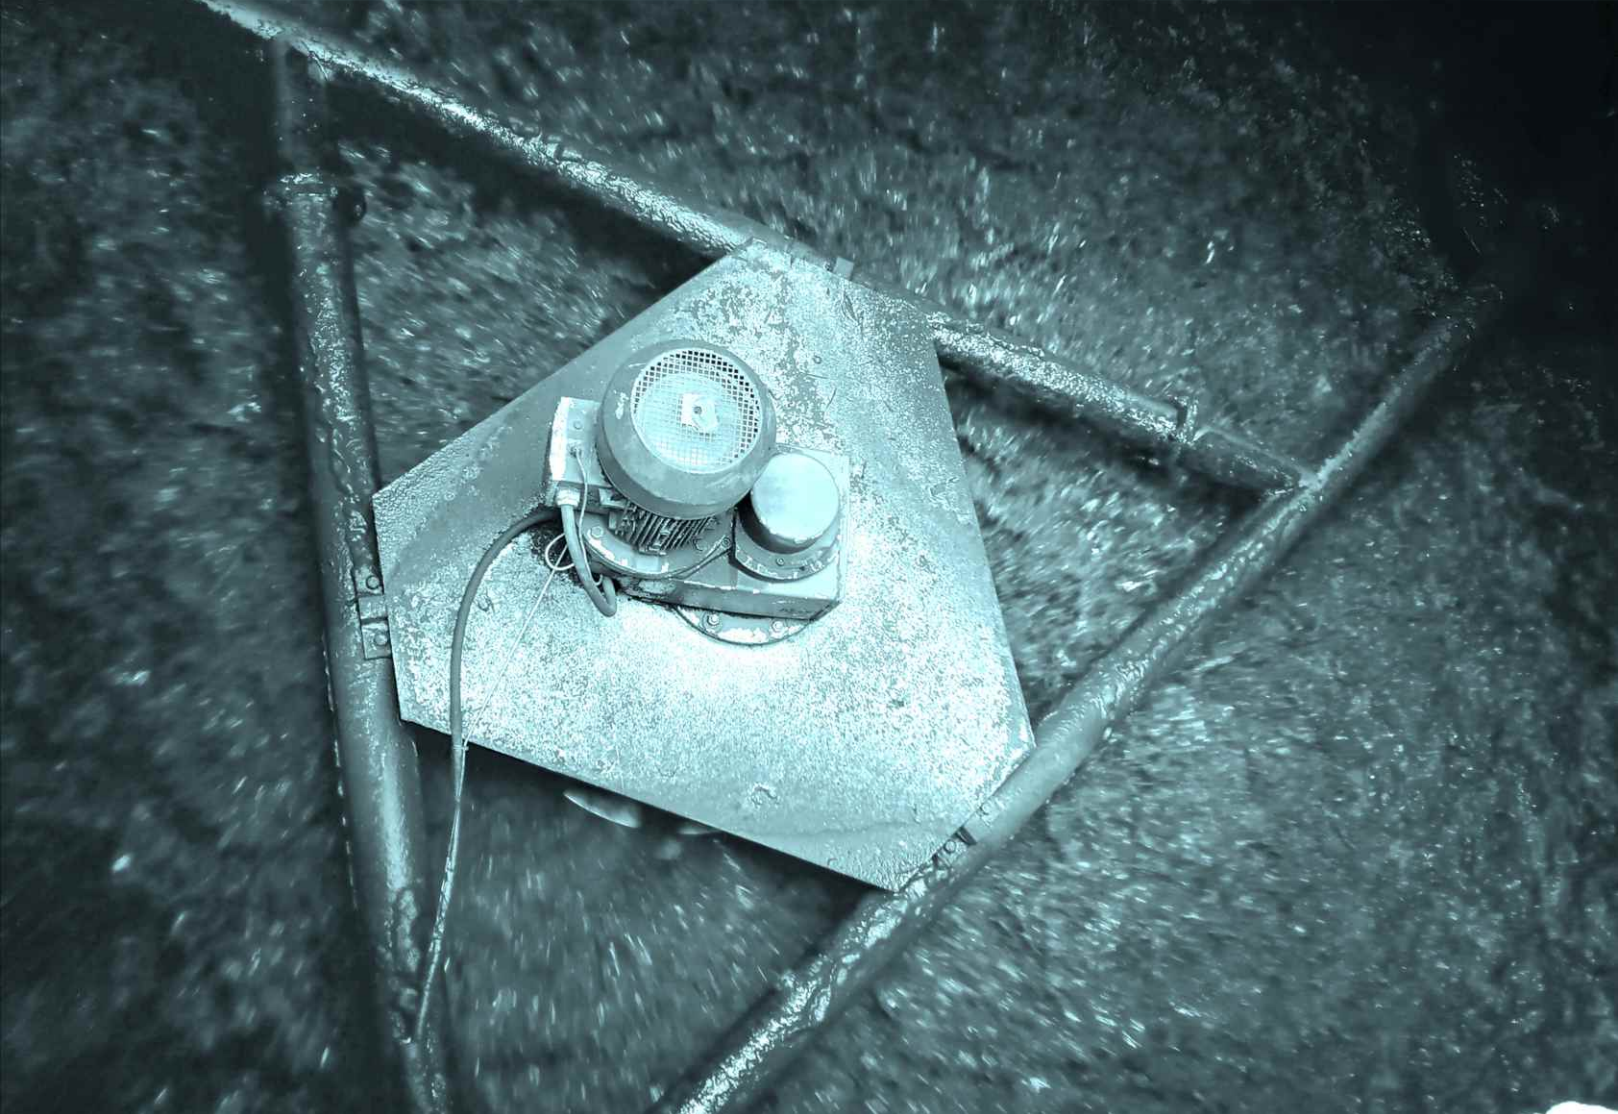

Sampling system ENKO

Aeration turbine type TNE

Screw conveyor type PSE

In addition, we offer:
execution of structures according to individual requirements
laser cleaning and corrosion removal services from carbon and stainless steels
devices made in ATTEX version
electromagnetic flow meters
measuring of wastewater tankers
